Protects the wound, minimizes pain and maceration
WHAT IS IT?
ADAPTIC™ Non-Adhering Dressing is a primary wound contact dressing designed to minimize wound adherence. It consists of a knitted cellulose acetate mesh impregnated with a specially formulated petrolatum emulsion.

HOW DOES IT WORK?

Knitted cellulose acetate mesh, impregnated with petrolatum emulsion

Protects the wound, minimizes pain
Adherence of the dressing to the wound has been identified as the most important factor contributing to pain at dressing change¹.

The unique mesh of ADAPTIC™ Dressing helps protect regenerating tissue by minimizing wound trauma at dressing change².

An RCT comparing three non-adherent dressings ADAPTIC™ Dressing (n=35), Mepitel® (n=37) and a non-medicated tulle gras (n=36) involving 99 patients with hand surgery wounds showed².

% Patients reporting pain free removal
Reduces the risk of maceration and adherence

The pore sizes of ADAPTIC™ Dressing mesh:
- Allows easy passage of exudate to the secondary absorbent dressing, thus minimizing the risk of pooling and maceration at the wound site
- Reduces the risk of tissue adherence to both ADAPTIC™ Dressing and the secondary dressing

The pore size is designed to minimize the pooling of fluid at the wound site and allows the free passage of exudate through the dressing.

Clinical data

An RCT comparing three non-adherent dressings ADAPTIC™ (n=35), Mepitel® (n=37) and a non-medicated tulle gras (n=36) involving 99 patients confirms:
- ADAPTIC™ Dressing protects regenerating tissue
- Patient pain and trauma is minimized during dressing changes

WHEN TO USE IT

ADAPTIC™ Non-Adhering Dressing is indicated for dry to highly exuding wounds where adherence of dressing and exudate is to be prevented including:
- 1st and 2nd degree burns
- Lacerations and abrasions
- Grafts
- Venous ulcers
- Pressure ulcers
- Nail extractions
- Eczema
- Staples and suture lines
- Surgical incisions and reconstructive procedures

ADAPTIC™ Non-Adhering Dressing can be used with compression therapy.

ADAPTIC™ Non-Adhering Dressing can be cut to the size of the wound without unravelling and shredding.
USER GUIDE

BEFORE APPLICATION

Refer to the instructions for use.

Select a size of ADAPTIC™ Dressing that is larger than the wound. Prepare the wound according to wound management protocol. Ensure skin surrounding the wound is dry. Remove the ADAPTIC™ Dressing from the box.

Dressing preparation

1. If needed ADAPTIC™ Dressing may be cut to size with sterile scissors.

Dressing application

1. Place ADAPTIC™ Dressing directly over the wound using surgical tongs or forceps and smooth in place around the wound.
2. If more than one piece of ADAPTIC™ Dressing is required, ensure dressings overlap, to avoid secondary dressing adherence to the wound. Overlap should be minimised to prevent occlusion of holes.

Secondary dressing application

Cover ADAPTIC™ Dressing with a secondary dressing such as TIELLE™ Dressing. Choose the secondary dressing based on the level of exudate.

Apply any secondary cover or retention/compression bandage.

Dressing change and removal

Dressing change frequency is dictated by good wound care practice and will depend on the condition of the wound. ADAPTIC™ Dressing may be left in place for several days depending upon amount of exudate.

To learn more about the benefits of ADAPTIC™ Non-Adhering Dressings, call 800-275-4524 or visit acelity.com
