Silent Cartridge Technology

Innovative design creates powerful wound therapy without any electrical power.

Patient-Friendly Features

• Small, lightweight design can be hidden under clothes
• No batteries to interfere with daily living
• Visual indicator displays when cartridge is full or discharged

Innovative Design

• Proprietary spring mechanism generates consistent, even levels of pressure
• BIOLOCK™ Technology gels exudate for exudate containment
• -125mmHg pressure setting

SNAP™ Therapy System
Treat small, low-exudating wounds with disposable NPWT¹
SNAP™ Therapy System

Combines the simplicity of advanced wound dressings with the proven benefits of negative pressure wound therapy in a discreet design.

Clinical Evidence

Armstrong

In a multicenter RCT, 132 patients with lower extremity diabetic and venous wounds were enrolled in the study. 118 patients were treated either with SNAP™ Therapy (n=59) or V.A.C.® Therapy (n=56), with 115 patients completing the study.
- Patients were treated for up to 16 weeks or complete wound closure.
- Primary end point analysis of wound size reduction found that SNAP™ Therapy treated subjects demonstrated non-inferiority to V.A.C.® Therapy subjects at 4, 8, 12 and 16 weeks (p=0.0030, 0.0130, 0.0051 and 0.0044, respectively).
- The study indicated that the effect of the SNAP™ Therapy System was not significantly different than that of the V.A.C.® Therapy System in promoting complete wound closure in the population studied (p=0.9620).
- SNAP™ Therapy patients reported less interruption of activities on daily living compared to V.A.C.® Therapy patients. However, pain associated with treatment was not significantly different between treatment groups.
- Other benefits noted by the authors were shorter time to dressing application and ease of use.
- However, despite randomization, the initial wound size was significantly greater in the V.A.C.® Therapy patients than in the SNAP™ Therapy patients (mean of 9.95cm² vs 5.37cm²; p=0.0093)

Marston

In a multicenter RCT, 40 patients with venous leg ulcers were treated either with SNAP™ Therapy (n=19) or V.A.C.® Therapy (n=21)
- Patients were evaluated for 16 weeks or complete wound closure.
- Primary end point analysis of wound size reduction found that SNAP™ Therapy treated subjects significantly greater wound size reduction than in V.A.C.® Therapy subjects at 4, 8, 12 and 16 weeks (p-value=0.0039, 0.0086, 0.0002, and 0.0005, respectively).
- 53% of SNAP™ Therapy patients achieved 50% wound closure at 30 days compared to 24% of V.A.C.® Therapy patients.
- However, despite randomization, the initial wound size was significantly greater in the V.A.C.® Therapy patients than in the SNAP™ Therapy patients (mean of 11.6cm² vs 4.49cm²).
SNAP™ Advanced Dressing Kits

Proprietary hydrocolloid dressing offers periwound protection and easy removal. Additional accessories are designed to simplify dressing applications.

SNAP™ Advanced Hydrocolloid Dressings

- Absorptive hydrocolloid properties help to maintain seal in the presence of exudate or sweat to help reduce periwound maceration
- Disposable components with off-the-shelf convenience
- Fully-integrated microport enables flexibility and a tight bending radius for wounds located in difficult areas
- Cut-to-length tubing and integrated one-way flow for improved safety
- Available in two sizes: 10cm x 10cm and 15cm x 15cm

Specialty Bridge Dressing

- Completely flat, comfortable dressing surface to help minimize further pressure damage
- Integrated bridge and port for one-step application
- Soft pad cushioning under bridge for improved patient comfort

Usage Locations:

- Diabetic Foot Ulcer
- Acute Wounds
SNAP™ Advanced Dressing Kits

Proprietary hydrocolloid dressing offers periwound protection and easy removal. Additional accessories are designed to simplify dressing applications.

**Interface Layers**

- Available with a BLUE foam interface
- Facilitates even levels of negative pressure*

**SNAP™ SecurRing™ Hydrocolloid**

- Fast and easy sealing on uneven skin surfaces and challenging body contours
- Reduces accessories needed to seal and protect the wound from moisture
- Increased adhesion of the SNAP™ Dressing on dry and uneven skin

**SNAP™ Therapy Strap**

- Soft strap enables device to be conveniently and discreetly worn under clothes
