

*"We have found using V.A.C.® Therapy has been a great benefit to our practice, making it easier to manage wound cases. It promotes healing by enhancing perfusion and reducing swelling. It has also shown a demonstrable difference in getting skin grafts to take, with consistently better outcomes. We have been able to save staff time through fewer dressing changes and get the patients home more quickly. This allows me to see more patients."*

*"One of our horses had a non-healing wound for several months. V.A.C.® Therapy was investigated and prescribed by our resident veterinarian, Dr. Morehead. We saw a remarkable wound healing progression during V.A.C.® Therapy treatment, ultimately resulting in the horse returning to normal activities faster than expected. In addition, your animal health team provided unparalleled support throughout the process — from initial application through subsequent dressing changes. We are very pleased with the end results and the benefits that V.A.C.® Therapy provided. We would definitely recommend the use of V.A.C.® Therapy System to others and look forward to your success."*
